CONTENTS

JANUARY

R. DUMONT and A. C. LEVASSEUR-REGOURD	1	Zodiacal light gathered along the line of sight. Retrieval of the local scattering coefficient from photometric surveys of the ecliptic plane
T. ARAKI, J. H. ALLEN and Y. ARAKI	11	Extension of a polar ionospheric current to the nightside equator
W. R. SKINNER and P. B. HAYS	17	Brightness of the O_2 atmospheric bands in the daytime thermosphere
C. J. BROOKES	23	The helium drag effect on the orbit of *Explorer* 19
S. N. KUZNETSOV, V. D. ILYIN and K. KUDELA	39	The effect of a geomagnetic storm on energetic trapped protons at low altitudes
H. K. BIERNAT, N. I. KÖMLE and H. I. M. LICHTENEGGER	45	Analytical two-dimensional model of a quadrupole magnetosphere
R. J. MORRIS and K. D. COLE	53	Pcl–2 discrete regular daytime pulsation bursts at high latitudes
M. NICOLET	69	Aeronomical aspects of mesospheric photodissociation: processes resulting from the solar H Lyman-alpha line
S.-I. AKASOFU	81	A magnetospheric storm with a nearly constant input rate for about 24 hours
J. S. WAGNER and J. R. KAN	89	On the field-aligned scale length of the V-shaped auroral potential structure
D. M. C. WALKER	97	Geopotential harmonics of order 15 and 30, from analysis of the orbit of satellite 1971–10B
V. A. KRASNOPOLSKY	109	Chemical composition of Venus clouds
K. HENRIKSEN, G. G. SIVJEE C. S. DEEHR and H. K. MYRABØ	119	Ground-based observations of O_2 ($b^1\Sigma_g^+ - X^3\Sigma_g^-$) atmospheric bands in high latitude auroras
D. J. SOUTHWOOD and M. A. SAUNDERS	127	Curvature coupling of slow and Alfvén MHD waves in a magnetotail field configuration
SHORT PAPERS		
M. D. MORRISON	135	Laboratory measurement of the OI 1173/989 Å branching ratio

FEBRUARY

V. A. VLASKOV and K. HENRIKSEN	141	Vibrational temperature and excess vibrational energy of molecular nitrogen in the ground state derived from N_2^+ emission bands in aurora
I. G. RICHARDSON	147	Anisotropy of >35 keV ions in corotating particle events at 1 AU
W. ALLAN, E. M. POULTER, K.-H. GLASSMEIER and H. JUNGINGER	159	Spatial and temporal structure of a high-latitude transient ULF pulsation
L. MONCHICK, M. J. LINEVSKY, C. I. MENG, S. FAVIN, S. CHAKRABARTI and F. PARESCE	175	Some auroral properties from far ultraviolet observations
M. M. SHEPHERD and G. G. SHEPHERD	183	Projection of auroral intensity contours into the magnetosphere
BADRUDDIN, R. S. YADAV and N. R. YADAV	191	Intensity variation of cosmic rays near the heliospheric current sheet
T. YAGI and P. L. DYSON	203	Measurements of thermospheric temperatures at a mid-latitude station
R. L. GATTINGER, F. R. HARRIS and A. VALLANCE JONES	207	The height, spectrum, and mechanism of type-B red aurora and its bearing on the excitation of $O(^1S)$ in aurora
D. G. KING-HELE and D. M. C. WALKER	223	Individual geopotential coefficients of order 15 and 30, from resonant satellite orbits

VOL. 33 1985

K. YUMOTO — 239 — Low-frequency upstream wave as a probable source of low-latitude Pc 3–4 magnetic pulsations

BOOK REVIEW — 251

MARCH

L. J. LANZEROTTI, T. J. ROSENBERG, A. WOLFE and C. G. MACLENNAN — 253 — Hydromagnetic field line resonances and modulation of particle precipitation

J. L. QUEFFELEC, B. R. ROWE, M. MORLAIS, J. C. GOMET and F. VALLEE — 263 — The dissociative recombination of N_2^+ ($v = 0, 1$) as a source of metastable atoms in planetary atmospheres

F. Z. FEYGIN, YU. P. KURCHASHOV, V. A. TROITSKAYA and K. DOBEŠ — 271 — Red–violet asymmetry in pearl satellites' birth

S. -I. AKASOFU — 275 — Vortical distribution of sunspots

S. WEI, B.-H. AHN and S. -I. AKASOFU — 279 — The global joule heat production rate and the *AE* index

G. V. GROVES and J. M. FORBES — 283 — Mean zonal and meridional accelerations and mean heating induced by solar tides for equinox and solstice conditions

S. S. SAZHIN and E. M. SAZHINA — 295 — Quasielectrostatic whistler-mode propagation

R. W. SMITH, K. HENRIKSEN, C. S. DEEHR, D. REES, F. G. MCCORMAC and G. G. SIVJEE — 305 — Thermospheric winds in the cusp: dependence of the latitude of the cusp

E. J. NICOL, J. MACFARLANE and R. L. HAWKES — 315 — Residual mass from atmospheric ablation of small meteoroids

G. C. SETHIA, G. J. BAILEY, R. J. MOFFETT and J. K. HARGREAVES — 321 — Mid-latitude electron content modelling: the role of interhemispheric coupling

R. J. STEFANT — 333 — Comments on the proton whistler generation process

M. LESTER, K. -H. GLAßMEIER and J. BEHRENS — 351 — Pi 2 pulsations and the eastward electrojet: a case study

APRIL

H. NAGANO and T. ARAKI — 365 — A statistical study on Psc 4 and Psc 5 observed by geostationary satellites

L. L. COGGER, J. S. MURPHREE, C. A. TEPLEY and J. W. MERIWETHER, JR. — 373 — Measurements of the *E* region neutral wind field

H. TAKAHASHI, P. P. BATISTA, Y. SAHAI and B. R. CLEMESHA — 381 — Atmospheric wave propagations in the mesopause region observed by the OH(8, 3) band, NaD, O_2A(8645 Å) band and OI 5577 Å nightglow emissions

S. S. SAZHIN, M. HAYAKAWA and Y. TANAKA — 385 — On the fine structure of the ground-based VLF chorus as an indicator of the wave–particle interaction processes in the magnetospheric plasma

T. J. ODERA and W. F. STUART — 387 — The relationship between the IMF magnitude and the frequency of Pc 3, 4 pulsations on the ground: simultaneous events

K. NAGASHIMA, S. SAKAKIBARA, A. G. FENTON and J. E. HUMBLE — 395 — The insensitivity of the cosmic ray galactic anisotropy to heliomagnetic polarity reversals

M. I. PUDOVKIN, S. A. ZAITSEVA, T. A. BAZHENOVA and V. G. ANDREZEN — 407 — Electric fields and currents in the Earth's polar caps

O. A. TROSHICHEV and V. G. ANDREZEN — 415 — The relationship between interplanetary quantities and magnetic activity in the southern polar cap

EDMOND MURAD — 421 — Implications of mass spectrometric measurements on Space Shuttle

D. REES, T. J. FULLER-ROWELL, M. F. SMITH, R. GORDON, T. L. KILLEEN, P. B. HAYS, N. W. SPENCER, L. WHARTON and N. C. MAYNARD — 425 — The westward thermospheric jet-stream of the evening auroral oval

W. J. BAGGALEY — 457 — Changes in the frequency distribution of f_0E_s and f_bE_s over two solar cycles

T. YAGI and P. L. DYSON — 461 — The response of the mid-latitude thermospheric wind to magnetic activity

BOOK REVIEW — 469

MAY

I. S. DMITRIENKO and V. A. MAZUR — 471 — On waveguide propagation of Alfvén waves at the plasmapause

P. MOORE — 479 — The effect of aerodynamic lift on near-circular satellite orbits

YU. P. MALTSEV — 493 — Effect of finite parallel conductivity on the magnetospheric convection

T. E. MOORE, A. P. BIDDLE, J.H. WAITE, JR. and T. L. KILLEEN — 499 — Auroral zone effects on hydrogen geocorona structure and variability

M. NICOLET and L. BOSSY — 507 — Solar radio fluxes as indices of solar activity

I. G. RICHARDSON — 557 — Low energy ions in co-rotating interaction regions at 1 AU: evidence for statistical ion acceleration

SHORT PAPERS

WILLIAM E. SHARP — 571 — Upper limits to [O] in the lower thermosphere from airglow

P. R. ROBINSON — 577 — A semiannual geomagnetic variation that is not dependent on the heliographic latitude effect

ERRATUM — 581

VOL. 33 1985

JUNE

A. RANTA, H. RANTA, T. TURUNEN, J. SILEN and P. STAUNING — 583 — High resolution observations of *D*-region by EISCAT and their comparison to riometer measurements

K. STASIEWICZ — 591 — The influence of a turbulent region on the flux of auroral electrons

E. M. DUBININ, P. L. ISRAELEVICH, N. S. NIKOLAEVA, I. KUTIEV and I. M. PODGORNY — 597 — Localized auroral disturbance in the morning sector of topside ionosphere as a standing electromagnetic wave

E. M. POULTER and W. ALLAN — 607 — Transient ULF pulsation decay rates observed by ground based magnetometers: the contribution of spatial integration

D. REES, R. GORDON, T. J. FULLER-ROWELL, M. SMITH, G. R. CARIGNAN, T. L. KILLEEN, P. B. HAYS and N. W. SPENCER — 617 — The composition, structure, temperature and dynamics of the upper thermosphere in the polar regions during October to December 1981

R. SCHMIDT and H. ARENDS — 667 — Laboratory measurement on impact ionization by neutrals and floating potential of a spacecraft during encounter with Halley's Comet

D. J. RODGERS, A. D. JOHNSTONE and J. J. SOJKA — 675 — *GEOS-2* measurements of cold ions in the magnetosheath

S. C. CHAPMAN and S. W. H. COWLEY — 685 — The motion of lithium test ions in the quiet time nightside magnetosphere: conservation of magnetic moment and longitudinal invariants

M. KUWASHIMA and H. FUKUNISHI — 711 — Local time asymmetries of the SSC-associated hydromagnetic variations at the geosynchronous altitude

W. J. BOULTON 721 The determination and analysis of the orbit of *NIMBUS* 1 *ROCKET*, 1964-52B Part 1: the orbits

W. J. BOULTON 735 The determination and analysis of the orbit of *NIMBUS* 1 *ROCKET*, 1964-52B Part 2: variations in orbital eccentricity

SHORT PAPER

V. W. J. H. KIRCHHOFF and H. TAKAHASHI 757 First sodium nightglow results for Natal

JULY

C. P. MCKAY 761 Noctilucent cloud formation and the effects of water vapor variability on temperatures in the middle atmosphere

D. B. BEARD and S. W. H. COWLEY 773 Electric and magnetic drift of non-adiabatic ions in the Earth's geomagnetic tail current sheet

D. J. WEBSTER and B. J. FRASER 777 Source regions of low-latitude Pc1 pulsations and their relationship to the plasmapause

K. MOHANAKUMAR 795 An investigation on the influence of solar cycle on mesospheric temperature

J. M. GREBOWSKY and M. W. PHARO III 807 The source of midlatitude metallic ions at *F*-region altitudes

M. A. BIONDI and D. P. SIPLER 817 Horizontal and vertical winds and temperatures in the equatorial thermosphere: measurements from Natal, Brazil during August–September 1982

J.-H. YEE and A. DALGARNO 825 Energy transfer of $O(^1S)$atoms in collision with $O(^1P)$atoms

C. OLMSTED and S.-I. AKASOFU 831 One-dimensional kinematics of particle stream flow with application to solar wind simulation

S. OKANO, J. S. KIM and T. ICHIKAWA 841 Measurements of thermospheric response to auroral activities

A. N. WRIGHT 847 Stationary distribution function for non-adiabatic particle motion in a one dimensional current sheet

T. YAMAMOTO and J. R. KAN 853 Double layer formation due to current injection

SHORT PAPER

S.-I. AKASOFU 863 A note on the magnetic network of photospheric magnetic fields

BOOK REVIEW 867

AUGUST

S. PETEHERYCH, G. G. SHEPHERD and J. K. WALKER 869 Observation of vertical *E*-region neutral winds in two intense auroral arcs

H. AMEMIYA, K. OYAMA and K. HIRAO 875 Observation of the energy distribution of thermal electrons in the midlatitude ionosphere

R. LUNDIN and E. M. DUBININ 891 Solar wind energy transfer regions inside the dayside magnetopause: accelerated heavy ions as tracers for MHD-processes in the dayside boundary layer

S. DUHAU and M. C. AZPIAZU 909 Empirical model of the *E*-region electron temperature around noon and at low magnetic activity

C. D. FRY, S.-I. AKASOFU, J. T. HOEKSEMA and K. HAKAMADA 915 The three-dimensional geometry of the heliospheric current sheet

C. D. FRY and S.-I. AKASOFU — 925 — A simulation study of distortion of the heliospheric sheet caused by solar activity

W. SUN, S.-I. AKASOFU, Z. K. SMITH and M. DRYER — 933 — Calibration of the kinematic method of studying solar wind disturbances on the basis of a one-dimensional MHD solution and a simulation study of the heliosphere disturbances betwen 22 November and 6 December 1977

INDEX FOR VOLUME 33, 1985 i

VOL. 33 1985

SUBJECT INDEX

AERONOMY

energy transfer from $O(^1S)$ in collisions with $O(^3P)$ atoms, 825
excitation of $O(^1S)$ in type-B red aurorae, 207
excitation rate and intensity calculations for OII 834Å dayglow, 1179
ionization-excitation of OII 834Å by electron impact of $O(^3P)$, 1303, 1309
photodissociation in mesosphere from Lyman alpha absorption, 69
shuttle glow,
  electron heating in local turbulence, 1023
  infrared, radiative relaxation of vibrationally excited NO, 1119
  ions in local environment, ambient-contaminant interactions, 945
  mass spectrometric measurements of local neutrals and ions, 421
vibrational temperature and vibrational energy of molecular nitrogen from N_2^+ auroral bands, 141
oxygen concentration in lower thermosphere, upper limit, from airglow, 571

AIRGLOW

OI(557.7nm) nightglow, atmospheric waves, 381
OI(630nm) nightglow, interferometric temperatures in thermosphere, 201
OII(83.4nm) dayglow, excitation rate and intensity calculations, 1179, 1303, 1309
O_2(762nm) dayglow, thermospheric brightness, 17
O_2(762nm) nightglow, atmospheric waves, 381
OH(8,3) nightglow, atmospheric waves 381
OH nightglow, waves near mesopause at auroral latitudes, 1013
Oxygen concentration in lower thermosphere, upper limit, 571

ATMOSPHERE, TERRESTRIAL

composition,
  CO, influence of variations on atmospheric temperature, 1187
  density, from satellite orbit analysis, see SPACECRAFT
  helium, winter bulge, from satellite orbit decay, 23
  hydrogen, geocorona, auroral zone effects, 499
  in equatorial mesosphere and lower thermosphere, related to formation of D-region, 1169
  in thermosphere, changes caused by severe magnetic storms, 1283
  in thermosphere, polar regions, 617
  ions, stratospheric, mass spectrometry, balloon borne, 1363
  nitric acid vapour in troposphere and lower stratosphere, 983
heating
  induced by solar tides, 283
  Joule, production rate and the AE index, 279
  solar EUV heating of thermosphere, 1451

motions
waves, mesospheric, at auroral latitudes, from OH observations, 1013
waves, propagation from nightglow observations, 381
winds, accelerations, mean zonal and meridional, from solar tides, 283
winds, by interferometric techniques, see INTERFEROMETER MEASUREMENTS
winds, CUSP region, analysis of optical data, 305
winds, E-region, auroral arcs and oval, 373, 869
winds, jet-stream, westward thermospheric, in auroral oval, 425
winds, response to magnetic activity, 461
winds, thermospheric, 305, 373, 461, 817, 869, 1049

temperature,
auroral activities, response to, 841
CO concentration and solar constant,response to, 1187
interferometric measurements, 201, 817, 841
polar regions, 617
solar cycle, influence in mesosphere, 795
water vapour variability, effects in middle atmosphere, 761

AURORA, OPTICAL

arcs,
associated vertical E-region neutral winds, 869
early afternoon, from boundary layer plasma, 1389
far ultra violet observations, auroral properties, 175
optical response of thermosphere to auroral activity, 841
N_2^+ bands, vibrational temperature and vibrational energy, 141
$O(^1S)$ excitation, projection of intensity contours into magnetosphere, 183
$O(^1S)$ excitation, properties of type-B red aurora, 207
$O(^1S)$ and $O(^1D)$ formation in reaction of N^+ with O_2, 1225
O_2 atmospheric bands, ground-based observations, 119

BOOK REVIEWS

Aeronomy of the Middle Atmosphere (D.R. Bates), 469
Atmospheric Electrodynamcs (H. Rishbeth), 1095
Physics of the Jovian Magnetosphere (B.R. Sandel), 251
Quantitative Aspects of Magnetospheric Physics (J.W. Dungey), 867

COMETS

foreshock region, energization of positive ions, 1243
Halley's, impact ionization and potential of spacecraft during encounter, 667

COSMIC RAYS

galactic anisotropy,
insensitivity to heliomagnetic polarity reversal, 395
intensity variation near heliospheric current sheet, 191
modulation in heliomagnetosphere, sidereal daily variations, 1057
muons, underground, corrected sidereal anisotropy, 1069

CURRENT SYSTEMS

current sheet,
electric and magnetic drift of ions, 773
non-adiabatic particle motion, 847, 1433
equatorial electrojet,
eastward, and Pi2 pulsations, 351
reverse, behaviour of vorticity area index, 1317
field-aligned, generation by magnetospheric plasma pressure inhomogeneities, 1037

VOL. 33 1985

ionospheric, extension of polar current to nightside equator during geomagnetic sudden commencement, 11
polar cap currents, 407
ring current, magnetospheric, growth rate and decay, 1097

ELECTRIC FIELD

auroral,
  double layer formation due to current injection, 853
  potential structure, V-shaped, field-aligned scale length, 89
finite parallel conductivity, effect on magnetospheric convection, 493
parallel generation, by magnetospheric plasma pressure inhomogeneities, 1037
polar cap region, solar-wind magnetosphere interactions, 407
small-scale intense fields in high latitude ionosphere, 1383
standing electromagnetic wave as auroral disturbance in topside ionosphere, 597
turbulent interaction with magnetic field and influence on flux of auroral electrons, 591

ELECTRON BEAMS

radiation from long pulse trains in space plasma, 953

ENERGY TRANSFER

from $O(^1S)$ through collisions with O(3P) atoms, 825
from solar wind to magnetosphere, correlation between supply and consumption, 1091

GEOMAGNETIC FIELD

activity,
  AE index, and the global Joule heat production rate, 279
  auroral, optical measurement of thermospheric response, 841
  in southern polar cap, related to interplanetary quantities, 415
  response of mid-latitude thermospheric wind, 461
field-aligned scale length of auroral potential structure, 89
field line eigen frequencies, measured from observations of Pc4 pulsations, 1369
magnetospheric alignment with extended auroral intensity contours, 183
semiannual variations independent of heliographic latitude effect, 577
small scale intense fields in high-latitude ionosphere, 1383
storm,
  effect on energetic trapped protons, 39
  magnetospheric, with constant input rate, time variations, 81
  severe, resulting thermospheric composition changes, 1283
substorm, energetic electrons in outer radiation belt, 1259
sudden commencement, extension of ionospheric currents, 11, 711

GEOMAGNETIC PULSATIONS

Alfvén waves,
  waveguide propagation through ionosphere, 1103
  waveguide propagation through plasmapause, 471
giant pulsations in the plasmasphere, 1155
long period, > 20 minutes before proton flares on sun, 1251
Pc1 spectra, satellite frequencies, red-violet asymmetry, 271

GEOMAGNETIC PULSATIONS

Pc1-2
  daytime bursts at high latitude, 53
  Fourier analysis and fundamental frequencies of magnetospheric cavity, 993

low latitude, source regions and relationship to plasmapause, 777
polarization and electron precipitation, 1277
Pc3-4,
frequency of, related to IMF magnitude, 387
spatial phase structure, 1073
viable source in low-frequency upstream wave, 239
Pc4, high resolution method of direct measurement of magnetic field line eigen frequencies, 1369
Pc4-5, statistical study, satellite observations, 365
Pi2, and eastward electrojet, 351
ULF,
decay rates of transients, by ground-based magnetometers, 607
spatial and temporal structure, 159
VLF,
chorus fine structure, and magnetospheric wave-particle interaction, 385
whistlers, quasielectrostatic propagation, 295
whistlers, proton, generation process 333

GRAVITY FIELD

geopotential harmonics from satellite orbit analysis, 97, 223, 1145
influence of planet acting on the orbital elements of small celestial bodies, 1359

HEATING, ATMOSPHERIC

global Joule heat production rate from AE index, 279
induced by solar tides, 283

HELIUM

atmospheric winter bulge, from satellite orbit decay, 23

INCOHERENT SCATTER

see IONOSPHERE

INTERFEROMETRIC MEASUREMENTS

Fabry-Perot
E-region winds, four categories of wind characteristics, 373
thermospheric winds, an inversion technique for recovering velocities in the presence of scattered light, 1049
557.7nm, vertical E-region winds in auroral arcs, 869
630nm, thermospheric temperatures, auroral electrojet activity, 841
630nm, thermospheric temperatures, comparison to MSIS model, 201
630nm, thermospheric temperature, and neutral winds, 817

INTERPLANETARY MAGNETIC FIELD

B_y component, partial penetration into magnetosphere, 1327
heliomagnetic polarity reversals and cosmic ray galactic anisotropy, 395
relationship to frequency of Pc 3, 4 pulsations, 387
relationship to magnetic activity in southern polar cap, 415

INTERPLANETARY SPACE

heliospheric current sheet, geometry and distortion, 915, 925
ions in corotating regions at 1AU, 147, 557

VOL. 33 1985

IONOSPHERE

auroral particle precipitation and associated disturbances, 591, 597
D-region,
  electron density, by EISCAT incoherent scatter, 583
  formation of, measurement of NO and related parameters, 1169
electron content model, role of interhemispheric coupling, 321
E-region, electron temperatures
  distribution in mid-latitudes 875
  empirical model at low magnetic activity, 909
F-region, source of metallic ions, 807
high-latitude,
  dayside trough, model and measurement comparison, 1375
  fine structure of intense small-scale electric and magnetic fields, 1383
sporadic-E,
  frequency distribution over two solar cycles, 457
  observations by EISCAT radar, 1407
spread-E, and its relationship with spread-F, 1081

JUPITER

near equatorial current feature, measurement and interpretation, 987

LYMAN ALPHA

mesospheric photodissociation, aeronomic aspects, 69

MAGNETOHYDRODYNAMICS

boundary layer processes, solar wind energy transfer and accelerated heavy ions 891
convective amplification of upper hybrid waves, effects of density gradients, 1331
drift anisotropy instability of finite-β magnetospheric plasma, 1229
drift of ions in geomagnetic tail current sheet, 773
excitation of ionospheric waveguide by a localized packet of Alfvén waves, 471, 1103
field line resonances and modulation of particle precipitation, 253
group velocity of surface waves on plasma sheet boundary, 1313
kinematics of particle stream flow, application to solar wind, 831
non-adiabatic particle motion in one-dimensional current sheet, 847
resonance coupling oscillations of the slow magnetosonic wave in a non-uniform plasma, 1029
solar wind disturbances, calibration of the kinematic method, 933
SSC-associated hydromagnetic variations, local time asymmetries, 711
wave-particle interaction processes from fine structure of VLF chorus, 385
waves, slow and Alfvén, in magnetotail field configuration, 127

MAGNETOSPHERE

convection, effect of finite parallel conductivity, 493
electric-magnetic field interaction, influence on auroral electron flux, 591
energy transfer from solar wind through reconnection, supply and consumption, 1091
geomagnetic tail current sheet, drift of ions, 773
magnetosheath,
  and plasma sheet, energy spectra of particle bursts, 1109
  cold ions, GEOS-2 measurements, 675
magnetotail current sheet, non-adiabatic particle scattering, 1433
motion of lithium test ions, AMPTE, 685
outer radiation belt, energetic electrons during substorm, 1259
penetration of IMF B_y component, 1327
photoelectrons observed at distances up to 7 Earth radii, 1267
plasma, non-uniform, resonance coupling oscillations of slow magnetosonic wave, 1029
plasma pressure inhomogeneities, generation of field-aligned currents and electric fields, 1037

proton energetics, effect of geomagnetic storm, 39
quadrupole, two-dimensional model, 45
ring current, growth rate and decay, 1097
storms, see GEOMAGNETIC FIELD

METEORITIC MATERIAL

metallic ions at E-region altitudes, source of, 807
meteoroids, residual mass from atmospheric ablation, 315
orbiting bodies, influence of planets gravitational field, 1359

MODELS

E-region, electron temperatures at low magnetic activity, 909
global 3-dimensional thermospheric, composition, structure, temperature, 617
magnetosphere, quadrupole, analytical 2-dimensional, 45
thermospheric composition changes during severe magnetic storms, 1283
ionospheric electron content, role of interhemispheric coupling, 321

MOONS

influence of planets gravitational field on small orbiting celestial bodies, 1359

NOCTILUCENT CLOUDS

formation, and effects on middle atmosphere temperatures, 761
mean particle size and water content of polar mesospheric clouds, 1209

PHOTODISSOCIATION

mesospheric, by absorption of Lyman alpha radiation, 69

PHOTOELECTRONS

topside ionosphere, observed in magnetosphere at 7 Earth radii, 1267

PLASMASPHERE

boundary layer plasma as source of auroral arcs, 1389
giant pulsations, 1155
plasmapause,
  relationship to low-latitude Pc1 pulsations, 777
  waveguide propagations of Alfvén waves, 471

PRECIPITATION

auroral, current injection, double layer formation, 853
bursts, energy spectra, in plasmasheet and magnetosheath, 1109
disturbance, as a standing electromagnetic wave, 597
electrons,
  and Pc1 pulsation polarization, 1277
  auroral, influence of low-frequency electrostatic turbulence, 591
  energetic, in outer radiation belt during substorm, 1259
  flux distributions, from auroral far UV observations, 175
modulation due to hydromagnetic wave resonances, 253
non-adiabatic scattering in magnetotail current sheet, 1433
proton, effect of geomagnetic storm on energetics, 39

VOL. 33 1985

REACTION KINETICS

branching ratio, OI 1173/9898, laboratory measurement, 135
dissociative recombination of N_2^+ as source of metastable atoms in planetary atmospheres, 263
energy transfer of $O(^1S)$ in collision with $O(^3P)$ atoms, 825
ionization of atomic oxygen by electron impact, 1303, 1309
reaction of N^+ with O_2, $O(^1S)$ and $O(^1D)$ production, 1225

SEEDING

lithium ions, into geomagnetic tail and motion in nightside magnetosphere, 685

SHUTTLE

glow, infrared, possible source, radiative relaxation of vibrationally excited NO, 1119
heating of electrons in local turbulence, 1023
low energy ions in local environment, ambient-contaminant interactions, 945
mass spectrometric measurements of local neutrals and ions, contaminants and shuttle glow, 421

SPACECRAFT

aerodynamic lift on near-circular satellite orbits, 479
geostationary, observations of Psc 4 and Psc 5, 365
impact ionization and floating potential during encounter with Halley's comet, 667
orbit analysis
  Cosmos 482, 1125
  Explorer 19, atmospheric composition, helium drag effect, 23
  Nimbus 1 rocket, orbital characteristics and air density, 721, 735, 965, 1417
  resonant satellite, geopotential harmonics, 223
  1967-11G, lumped geopotential harmonics, 1145
  1970-47B, 14th order resonance, 1439
  1971-10B, geopotential harmonics, 97

SUN

heliosphere, current sheet,
  distortion by solar activity, 925
  three-dimensional geometry, 915
photospheric magnetic fields, magnetic network, 863
proton flares, related to long period magnetic pulsations, 1251
solar cycle, influence on mesospheric temperature, 795
solar heating (EUV) of thermosphere, 1451
solar radio flux as indices of solar activity, 507
solar tides induced heating, mean zonal and meridional accelerations, 283
solar wind,
  energy supply to magnetosphere by reconnection, 1091
  energy transfer inside dayside magnetopause, 891
  heliosphere disturbances, one-dimensional MHD solution, 933
  particle stream flow kinematics, model, 831
sunspots, vortical distribution, 275

VENUS

chemical composition of clouds, 109

WINDS

see ATMOSPHERE, TERRESTRIAL

ZODIACAL LIGHT

scattering along line of sight, 1
